

# aXet.bid: Your RFP answer assistant

*Streamline your RFP response process with intelligence, speed and collaboration.*

## What is aXet.bid and how can it help you?

aXet.bid is an **AI-powered assistant** designed to simplify and accelerate the **creation of commercial proposals in response to RFPs**. It lets you **focus on strategy and value creation**, while the application takes care of structure, clarity and efficiency.

By acting as an assistant throughout the process, **it helps you**:

- **Save time** by analyzing complex RFP documents and identifying key requirements automatically.
- Ensure consistency with **centralized content** importation from SharePoint and reusable through the Response Hub.
- **Improve quality** with AI-powered writing, editing, and collaboration tools.
- Stay flexible with a **dynamic and intuitive workspace** where content can be adapted to each project's unique needs.

## Start working with aXet.bid

To start using aXet.bid, two initial requirements must be completed:

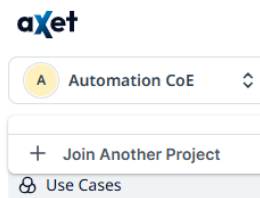

1. The first requirement is **to have a project within the aXet ecosystem**. For this step, you can create a new aXet project or add your user to an existing one.
2. The second step is to **link the aXet project to a .bid project** in order to start operating.

The steps to complete these requirements are described below.

### First, create a new aXet project in the Admin Panel

To create a new aXet project, first access the Admin Panel at <https://axet.nttdata.com/core/signup>, where you will be able to perform the following actions:

1. In the project selector, click *'Join another project'*.

2. Click *'New project'* to start the creation process.

**Join a project**  
Select the project you want to be associated with

Existing project New project

NTT DATA Project Region

North America

Enter the Project Name...

OKTA User Regions Access Security ⓘ

Select OKTA Regions for user access

☐ Remember to use our **generative AI responsibly**, monitoring the use of extensive queries and prioritizing efficiency for the benefit of all users and projects.

Create

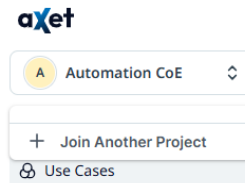

3. Choose the project region. Depending on the region to which the project will be assigned, it will be necessary to complete the following parameters:
  - IBIOL region: Just enter the project code that will be linked to the aXet project.
  - All other info will be auto-filled from OneERP.
  - Other regions: You'll need to fill in the details manually: Country, Client Name, Project Name, and select OKTA Regions (these determine where users can join from).
4. Tick the box to confirm responsible GenAI usage and click *'Create'* to finish.

You can **view and manage** your new project any time in the Project section of the Admin Panel.

## Or join an existing aXet project in the Admin Panel

Alternatively, if you want to join an existing aXet project access the Admin Panel at <https://axet.nttdata.com/core/signup> to perform the following actions:

1. In the project selector, click *'Join another project'*.

2. Click *'Existing project'* to start the creation process.

3. Choose the project from the dropdown list.
4. Confirm responsible GenAI usage by checking the box.
5. Click *'Request'*.
6. The project admin will get an email and approve your access.

## You can now create a .bid project

Once you have an aXet project, **you can also create it in aXet.bid.**

Any user can make this request through the address <https://axet.nttdata.com/bid/signup> under the "New project" tab. Select the corresponding aXet project, submit the form, and one of the superadministrators or users with the approver role will validate your request, creating the aXet project in .bid.

### Join a project

Select the project you want to be associated with

[Manage projects](#) [New project](#)

Select the AXET project ⓘ

Select...

☐ When registering as the administrator of a new project, you take on the responsibility of tracking the automation hours generated by this asset, committing to lead the project effectively.

Please remember to use our **generative AI responsibly**, monitor the usage of extensive queries, and prioritize efficiency for the benefit of all users and projects.

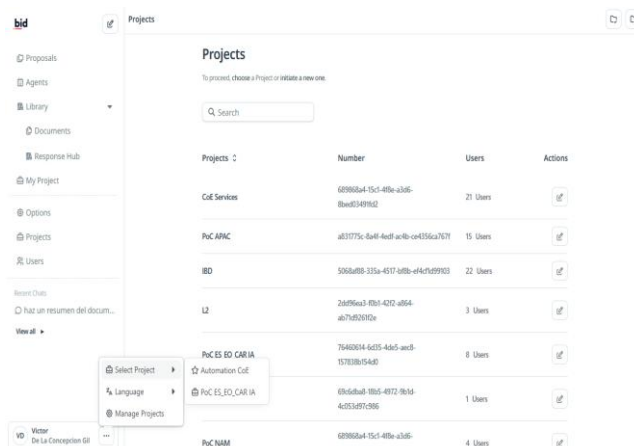

The request will be managed by one of the following users:

-  vdelacon@emeal.nttdata.com
-  jlvlasca@emeal.nttdata.com

The user who made the request becomes an administrator in .bid, and will be able to **add any user who previously belongs to the aXet project**. This can be done via the "New user" button from the "My project" menu option.

If you want to add a user who does not belong to the original aXet project, you must first add them in the aXet Admin Panel.

If you are **associated with more than one aXet.bid project**, you can oversee all your projects with a global view and easily select the one you want to work on: directly from the "Select Project" menu, or through the "Select an existing project" list accessible from the "Manage Projects" area.

The screenshot shows the .bid web interface. On the left is a sidebar with navigation options: Proposals, Agents, Library, Documents, Response Hub, My Project, Options, Projects, Users, Recent Chats, and a search bar. The main area is titled 'Projects' and contains a table of existing projects. A dropdown menu is open from the 'Projects' sidebar item, showing options: 'Select Project', 'Automation Call', 'Language', and 'Manage Projects'. The 'Manage Projects' option is highlighted.

# Application Interface

This is the **main screen** of aXet.bid and the **core options** that can be accessed through its interface.

1. **New chat.** Quickly access the AI Chat and start asking questions related to the project you're working on.
2. **Proposals.** You can select an RFP (Request for Proposal) from the entire repository or create a new one.
3. **Custom Actions.** View, create, or edit the Actions used by the AI editor during the commercial proposal writing process.
4. **Library.** Manage all your project documentation from this section.
  - a. **Documents:** Upload new files or update content from various repositories.
  - b. **Response Hub:** Activate the Response Hub, a comprehensive collective knowledge repository designed to enhance your proposals by providing access to frequently asked questions.
5. **Project.** If you have the necessary permissions, you can manage all information related to the project you're assigned to. You'll be able to view:
  - a. Project info
    - i. Project ID
    - ii. Manager ID
    - iii. Status
    - iv. Full list of users assigned to the project and manage their access rights.
  - b. Analysis Prompts

- i. The project administrator can create reusable proposal summary and analysis sections that will be made available to apply to all proposals in the project, allowing users to select each option individually.
6. **Options:** Here you can find all the project settings. Only available for superadmins.
7. **Projects:** Manage projects. Only available for superadmins.
8. **Users:** Manage active users within .bid. Only available for superadmins.
9. **Latest proposals used:** Quick and direct access to the most recently edited and active commercial proposals.
10. **Recent chats:** Quick and direct access to your latest AI Chat conversations, along with a shortcut to the full chat repository.
11. **Chat bar:** Write in natural language and attach documents to provide context for your queries.
12. **User area:** From here, you can select your project, choose the interface language, and access the project management section.

## Create a new proposal

To start working with an RFP, create a **new proposal**. To do this, you can access the “Proposals” area, where you will see a list of all the proposals that have been worked on so far within your project. From there, click the button in the top-right corner to begin creating your proposal.

The **proposal creation process** consists of three distinct steps:

1. **Registering proposal information.**
2. **Configuring the proposal workflow.**
3. **Defining the response structure.**

Let’s take a closer look at each of these three steps.

### 1. Registering proposal information

In this first step, you will need to **enter information about the proposal**. These **metadata** will not be used during the drafting and preparation of the response, but they will serve to **identify and classify** the proposal.

Fill in all the required fields:

- **Proposal title:** Set a name for your proposal.
- **Client name:** Indicate the client for whom you are preparing the proposal.
- **Business unit/Domain:** Specify the business area of the project.
- **Department/Division:** Define the department or division responsible for the project.
- **Project starting date and deadline:** Establish the start and end dates for the proposal preparation process.
- **Status:** Choose from the seven available status options to ensure the most accurate tracking within aXet.bid.

### Archived

Proposal saved and marked as closed

Next step

## 2. Configuring the proposal workflow

Click “Next Step” to proceed to the “Select Library” stage, the second step in setting up your project.

- **Select a language to generate your proposal:** Choose the language in which aXet.bid will generate the proposal content.
- **Upload RFP Files:** The RFP file is mandatory for the system to analyze and automatically generate a proposal. You can upload one or multiple files at a time. These files contain the detailed requirements of what the client intends to procure.

Once uploaded, the system uses generative AI to analyze the documents and propose an initial proposal structure for you to work on.

### Select library

1 / 2 Select library / 3

 Select

 **Response Hub**  
A collective knowledge repository with frequently asked questions, user-generated responses, and usage metrics to enrich your proposal.

 Connected

Go back

Next step

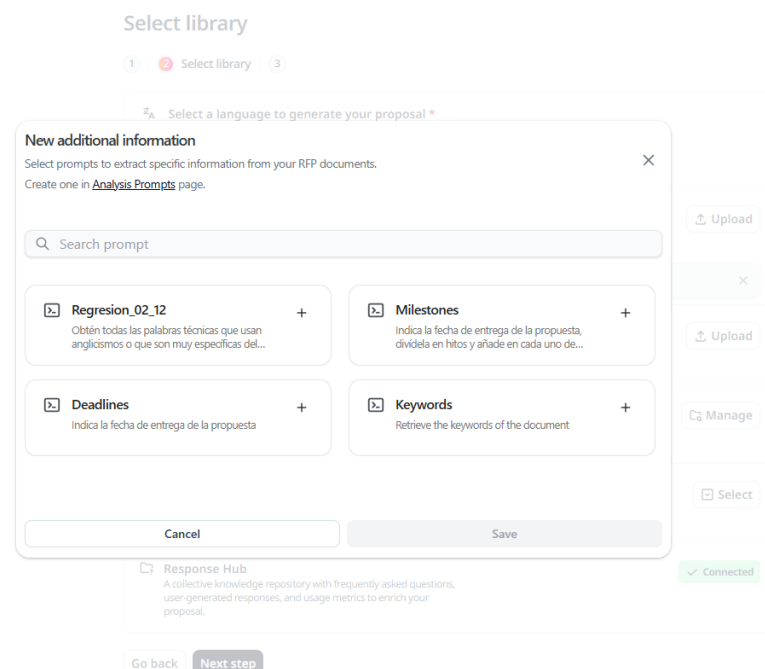

Additionally, to improve performance and speed up the proposal creation process, you can:

- **Upload additional documents:** Upload extra files to enhance the analysis, such as references, case studies, or supplementary information.

- **Add from Library:** The Library allows you to link an existing knowledge base to provide additional context and improve proposal accuracy.

This document repository can be reused throughout the entire proposal writing process and typically contains resources and materials that will also be relevant for future commercial proposals.

- **Additional information:** This section displays the different reusable analysis prompts that the project administrator has made available to the user in order to **customize the analytical summary** of the RFP. Each prompt selected from the modal, which is accessed through this option, will add an additional summary point to the analysis.

- **Response Hub:** A collective knowledge repository with frequently asked questions, user-generated responses, and usage metrics to enrich your proposal.

### 3. Defining the response structure

In this third step, aXet.bid allows you to **configure the proposal structure** to be used as a response to the RFP. To do so, it offers **two options**.

If the user selects “**Automatic Generation**”, the system will generate a **proposed content structure** based on the documentation provided in the previous step. This structure can later be further refined from the workspace, by **renaming, adding, or removing sections**.

Alternatively, the “**Custom Structure**” option allows you to **fully customize the structure** of the resulting document. To do this, you can attach an **additional document** containing specific information about the proposal outline to be generated, along with **explicit interpretation guidelines**, such as: “*Create the proposal table of contents based on the evaluation criteria table on page five of the attached document.*”

Structure selection

1 / 2 / 3 Structure selection

 **Automatic Generation** Default

Let BID analyze your uploaded RFP documents and automatically create the proposal structure based on the requirements found.

- Analyzes RFP requirements automatically
- Creates comprehensive section structure
- Includes relevant subsections and descriptions
- Recommended for standard RFP responses

 **Custom Structure**

Upload a document with your predefined proposal structure that BID will apply directly without additional analysis.

- Uses your exact structure specification
- No automatic analysis or modifications
- Perfect for standardized templates
- Maintains organizational consistency

 **Upload Structure Document**

Upload a document containing your proposal structure. The file should include:

- First-level sections with brief titles
- Second-level subsections with titles and descriptions
- Clear hierarchy and organization

**Additional instructions (Optional)**

ex.1: Only consider topics A and B of the document;  
ex.2: Return the processed content existing only on pages 04, 05, and 06;

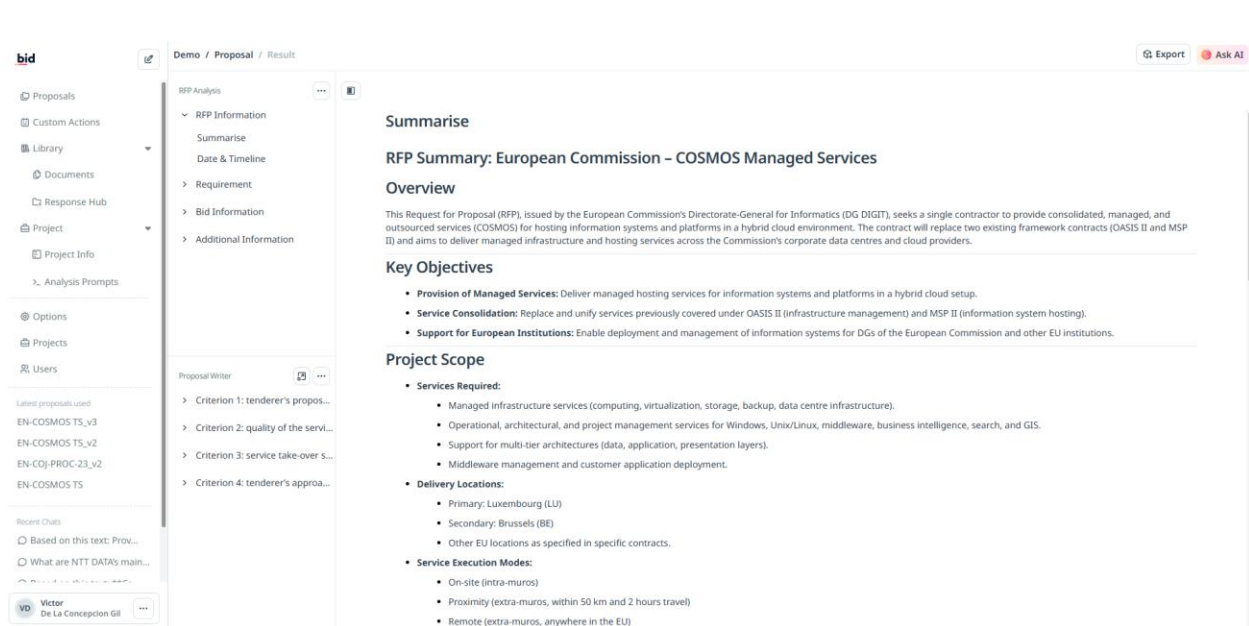

[Go back](#) [Next step](#)

## Start working on a proposal

Once the proposal creation is completed after filling in the three required steps, the user will be able to **start working on it**. To do so, the system will provide access to the **main proposal area**, where different **sections** will be displayed in the **left-hand navigation panel**, and a **text area** will be available in the **main working area**.

Below the side navigation area, you will find **two distinct sections**.

- The first one, “**RFP Analysis**”, will provide a **summary of the key characteristics** of the proposal. This is read-only information designed to **support decision-making processes**.
- The second one, “**Proposal Writer**”, will allow users to **collaboratively work on drafting the proposal**, supported by **content generation tools**.

Let's review the characteristics of each section in detail.

## RFP Analysis and Decision-Making

aXet.bid **automatically generates a detailed breakdown of your RFP** into its essential requirements.

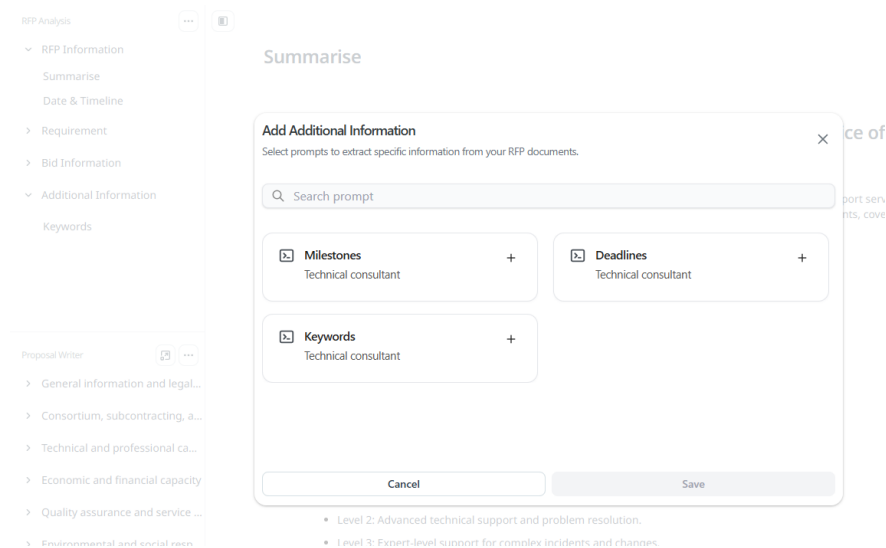

The system **identifies the essential requirements**, summarizes the scope of work, and highlights the elements your response must cover.

It also provides a **thorough overview of the document's contents**, including key objectives, project scope, technical requirements, evaluation criteria, submission guidelines, and contractual terms. The RFP analysis is structured into three distinct sections:

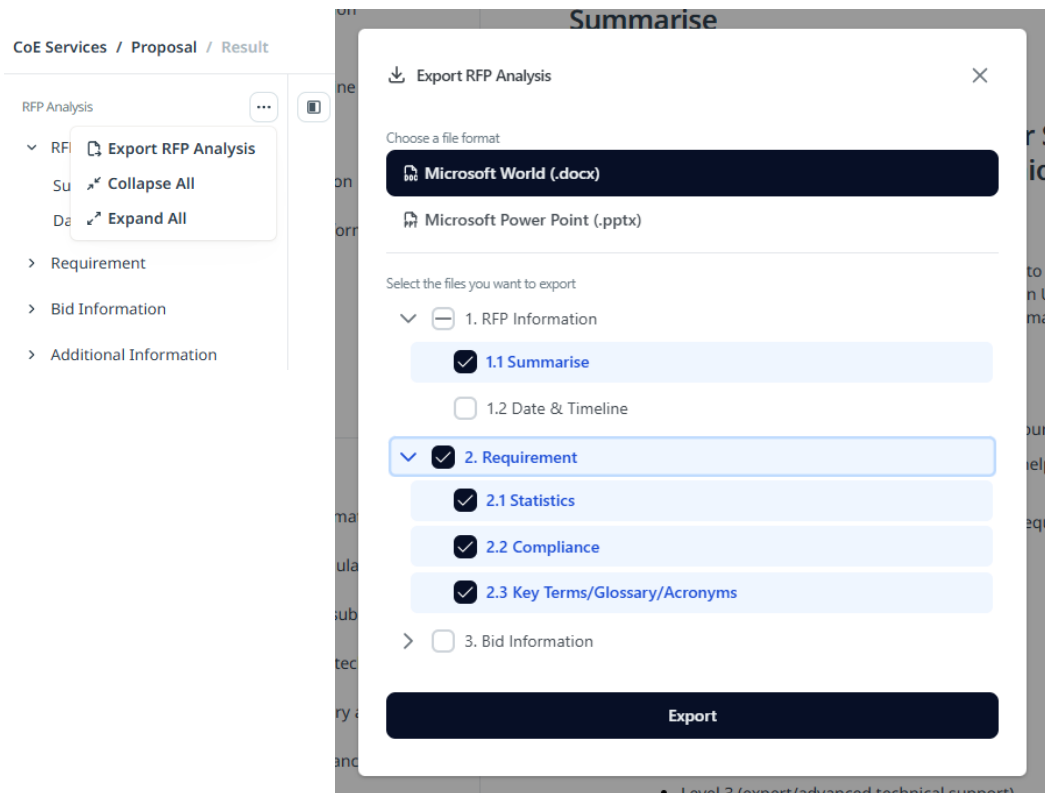

- **RFP information:** This section provides a summary of the context surrounding the RFP, including key dates such as the proposal evaluation period, the overall project timeline, and the notification of selected vendors.
- **Requirements:** This section outlines all the necessary elements to complete the RFP. It includes supporting statistics that justify the project, the Compliance model that ensures adherence to relevant regulations, and the Key Terms section, which guarantees a clear understanding of all terminology used throughout the document.
- **Bid information:** This section consolidates all information related to the RFP submission methods and the contractual terms of the project.

- RFP Analysis
- ▼ RFP Information
    - Summarise
    - Date & Timeline
  - > Requirement
  - > Bid Information
  - > Additional Information

aXet.bid generates this analysis by default, but the user can **customize** it by adding additional questions under the "**Additional Information**" section. Clicking the "+" option will open a modal window that allows adding the various additional questions enabled by the project administrator:

The summary information that aXet.bid generates under the heading "RFP analysis" can be exported to an external document. To do this, the user has the "**Export RFP Analysis**" option, which allows them to choose the sections to export as well as the format (Word or PowerPoint).

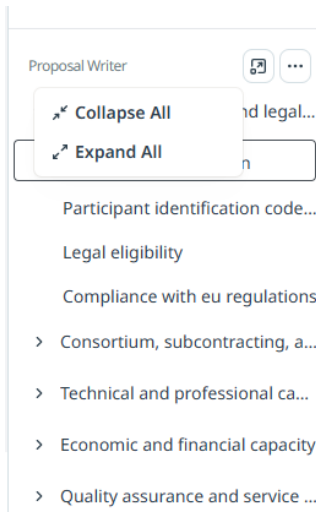

## Proposal Writer: commercial proposal creation

This is the core functionality of aXet.bid, where you can **create and refine your tailored commercial proposal**.

### Proposal structure

Based on the RFP analysis, aXet.bid **automatically generates a custom proposal outline**.

This structure adapts to the specific context of the project and **you can freely modify it: add new sections and rename them**, remove unnecessary ones, or **reorganize the flow** to match your preferred style.

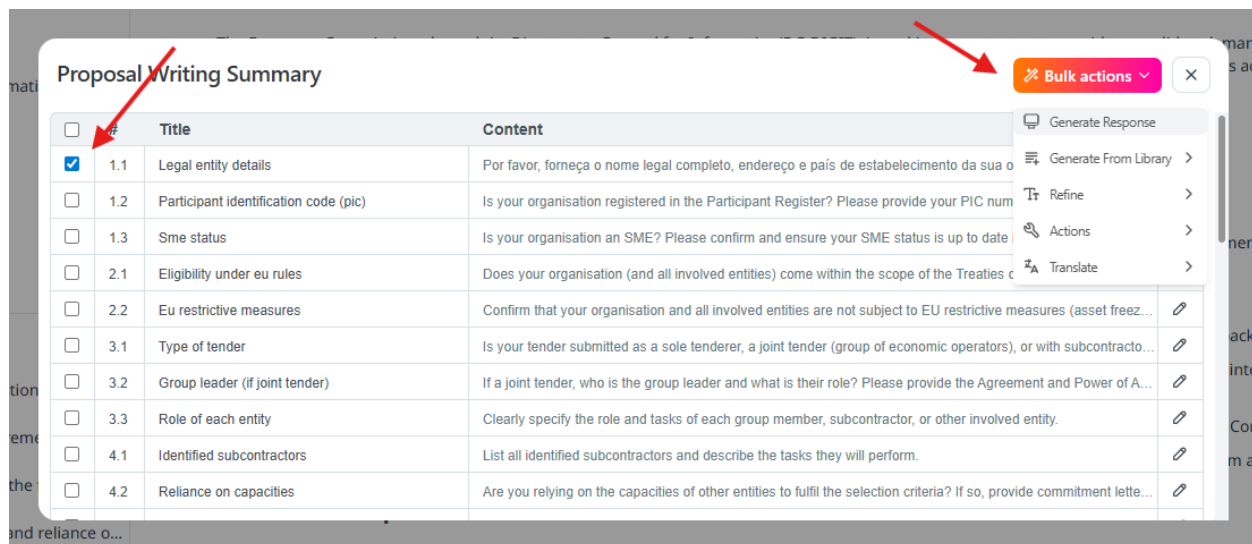

Beyond the options to expand and collapse the indexes, .bid provides a **tabular summary of all the items that make up the proposal**, allowing you to view the status of each section quickly and conveniently

And you can also make **bulk modifications** with the **AI** by selecting the sections you want to change and applying one of the options from the dropdown menu using the **Bulk actions** button

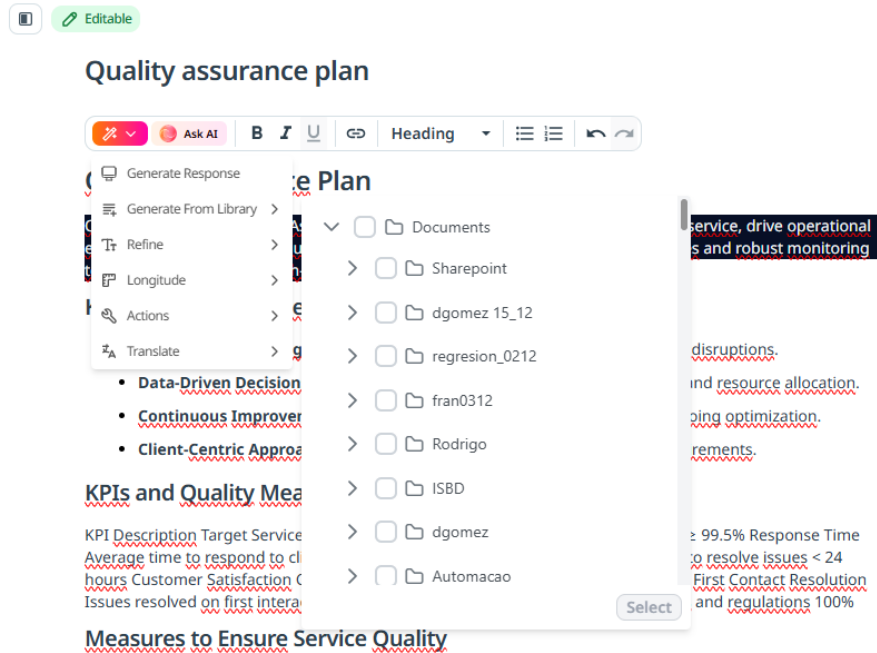

## Writing and Editing Tools

aXet.bid helps you write your commercial proposal, making the process much simpler. These are the tools that will help during the whole writing process:

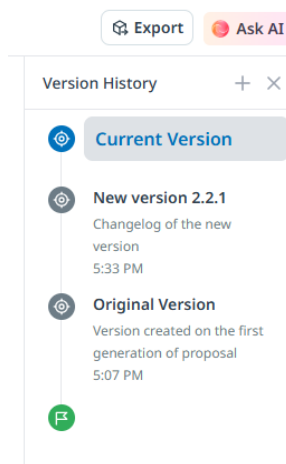

- **Smart content suggestions:** Each section includes guidance on what content to include, helping you focus and write faster. These suggestions are **fully editable and flexible**.
- **Text editing tools:** Use basic text editing features to tailor the content to your needs. You can apply bold or italics, add links, create headings, or insert bullet-point lists. Additionally, all text edits can be undone or redone at any time.
- **AI tools:** You can select any part of the text and refine it with:
  - **AI Chat:** It acts as your **expert functional partner throughout the proposal writing process**. You can ask questions in natural language to rewrite, clarify, or expand content. You can also search and reference information from your connected documentation. **Explore the full potential of this tool in the “AI Chat” section.**
  - **Smart pen:** Instantly improve your text using pre-built prompts or your own custom ones.
    - **Generate response:** Creates a persuasive draft highlighting strengths and benefits.

- **Generate from library:** Easily access your document library and Q&A response hub to expand the selected text based on the content of the chosen file.
- **Refine:** Quickly polish your text using various available prompts:
  - Change voice to “Will be”: Reformulates text into a professional, future-tense persuasive tone.
  - Check Incoherences: Reviews and corrects inconsistencies or contradictions in the text.
  - Clarity and conciseness: Simplifies language and removes redundancies for clearer communication.
  - Focus on benefits: Emphasizes the specific client benefits of the proposal.
  - Competitive differentiation: Highlights unique selling points and advantages over competitors.
  - Polishing and professionalism: Refines grammar, style, and tone for a professional finish.
- **Longitude:** Adjust the length of the selected text. You can set word limits, define how many words to expand, or specify character limits and expansion targets.
- **Actions:** Quickly access your predefined actions to adapt the text according to specific instructions. Create new ones from the Custom Actions area.
- **Translate:** Select the text you want to translate and choose the target language to apply the translation.

## Version control for proposal drafts

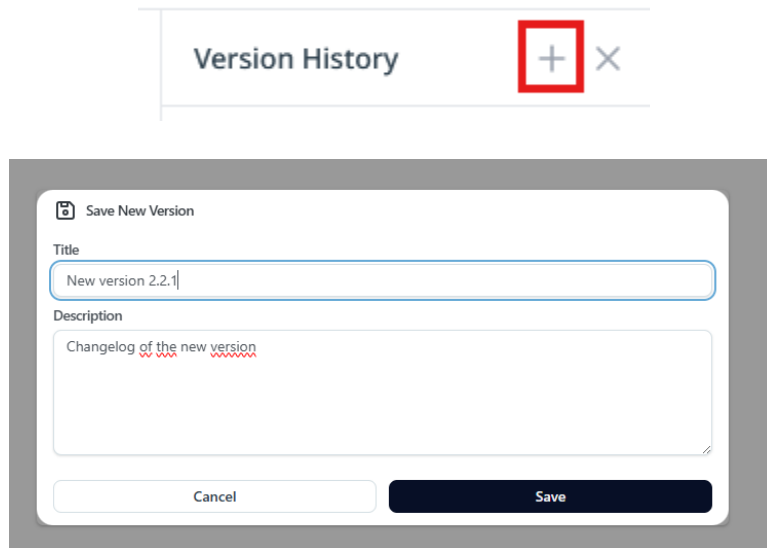

Within the writing canvas, the “**Version History**” button displays the different backups that have been created for each section of the proposal. Each version shows the date and time when it was saved, a summary of the version, and the user who generated it.

Saved versions can be automatic or manual.

- **Automatic versioning** is performed periodically every 10 seconds by aXet.bid, without requiring any user intervention, as long as a change has been made to the text. These backups are iterative and are stored up to a maximum of 10 versions. Once this limit is reached, the newest copy will replace the oldest one.

- The second type, **manual versions**, are created at the explicit request of the user, who can assign them a name and a description.

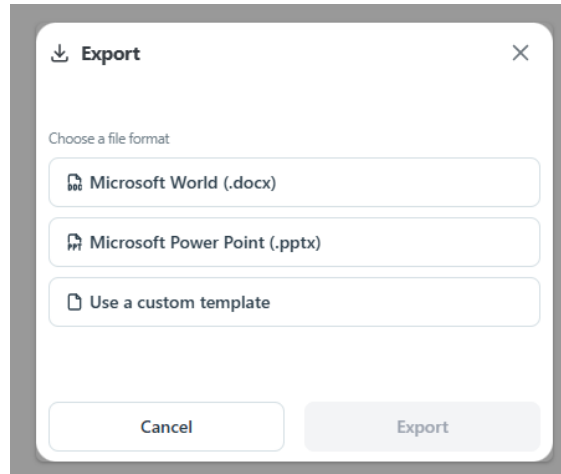

The image shows two parts of a software interface. The top part is a 'Version History' dialog box with a title bar and a close button. Below it is a 'Save New Version' form with a title field containing 'New version 2.2.1' and a description field containing 'Changelog of the new version'. The form has 'Cancel' and 'Save' buttons at the bottom.

When the user opens the history and clicks on a saved version, the text is loaded into the writing canvas. If the user then modifies the loaded text, it will automatically become the current version.

### Export your commercial proposal

Once your commercial proposal is ready you can export the document, **choose between your preferred formats:**

- aXet.bid Microsoft Word template (.docx)
- aXet.bid Microsoft Power Point template (.pptx)
- Custom template (.docx or .pptx).

You can now upload a personal document in **.docx** and **.pptx** formats. **aXet Bid** will add the content to the end of your uploaded file.

## Documentation management

Managing all your documentation is much easier with aXet.bid!

You can upload documents from multiple sources. Once registered, you will have access to a **dedicated project folder in SharePoint** where you can store all your files and manage your documentation efficiently.

After creating a new project in aXet.bid and uploading all the necessary documents, you can continue **managing and updating** your repository at any time from the **Library area**:

- **Documents:** From here, you can **upload new documents or update content from various repositories**, including SharePoint integrations, to keep your document base up to date and ensure your team works with the most relevant information. You can also use the search filters to quickly access the documentation you need.

## Documents

[Expired](#)[Upload](#)

Upload new documents or update content from various repositories, including SharePoint integrations, to keep your document base current and ensure teams work with the most relevant information.

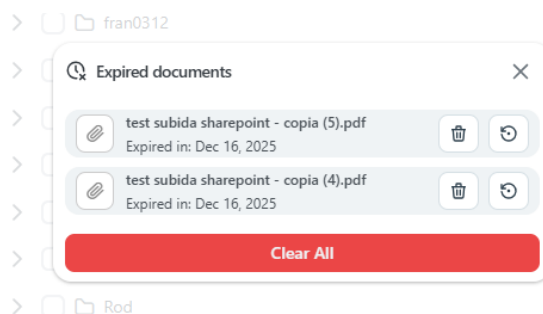

[View All](#)[Other Documents](#)[RFP's](#)☒ Sharepoint☒ SBD☒ 01. Propuestas técnicas contestadas (material a reutilizar)☐ 2024-0002-071-09.pdf90d  ☐ TCV18-21.pdf90d  ☐ 056\_23-SP.pdf90d  ☐ 073-23-OT.pdf90d  ☐ 2022\_004963.pdf90d  ☐ 2022EtL00040.pdf90d  ☐ 2023000373 (CONP20237238) Lote 2\_Oferta técnica.pdf90d  ☐ 2023000373 (CONP20237238) Lote1\_Oferta técnica.pdf90d  

The **documents indexed** in aXet.bid through the **SharePoint synchronization mechanism** have a **default validity period of 90 days**. The expiration time of each file is displayed using a colored label that shows the number of days remaining before it is de-indexed.

This validity **counter is reset individually to 90 days for each file** every time a query or an operation is made that, in order to be answered, requires the information contained in that document.

If the configured time period expires without any query being made to aXet.bid that requires that document, its **indexed information will be released** in order to optimize the use of the infrastructure.

If this happens and the user needs to **recover expired documents**, they can do so from the **"Expired"** option. This option will display a list of all files whose contents have been removed from the RAG, allowing their content to be re-indexed as long as the original document **still exists in SharePoint**.

There are three actions in this section:

- **Individual deletion:** Deletes the document and it can no longer be restored or viewed.
  - **Recovery:** Restores the document, making it appear again in the document tree with its retention period fully renewed, 90 days.
  - **Clear all:** Clears all records from this modal and, just like individual deletion, they can no longer be restored or viewed.
- 
- **Response Hub:** Activate the Response Hub, a **comprehensive collective knowledge repository** designed to enhance your proposals by providing access to frequently asked questions, user-generated responses, and detailed usage metrics. You can filter questions by most recent or oldest, or search directly using keywords.

## Response Hub

A comprehensive collective knowledge repository **designed to enhance your proposals** by providing access to frequently asked questions, user-generated responses, and detailed usage metrics.

Q Search

What does RFP mean and why is it important in procurement processes?

RFP stands for Request for Proposal. It is a fundamental document in procurement processes because it allows organizations to detail their needs and receive proposals from suppliers, promoting competition and transparency in the selection process.

13 days ago

... ▾

What are the main elements that an RFP should include?

An RFP should include: project scope, technical and functional requirements, evaluation criteria, deadlines, estimated budget, instructions for submitting proposals, and contact information. These elements ensure clarity and facilitate comparison between proposals.

## AI Chat

The AI Chat is available throughout the entire commercial proposal creation process and acts as your expert functional partner during every step of proposal writing.

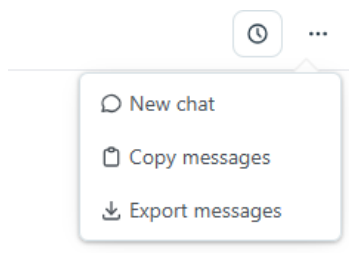

You can access it directly from the **Home Page** or from the **Recent Chats** area. While **writing the commercial proposal**, you can also use the chat by **making queries about the selected text** through the pop-up window.

Use **natural language** to ask any type of question related to the project you are working on.

Additionally, you can conveniently **attach documents from the chat bar** to reference them in your queries. To **ask the AI questions** while adding the **context of one or more documents** uploaded to the **document repository**, you can use the “@” option in the lower section of the chat.

From the chat interface, you can create a **New Chat**, **Copy Messages**, or **Export Messages**. You also have direct access to your **conversation history**, allowing you to review past discussions at any time.

You can also **open chats in new pages**, **edit the conversation title**, or **delete conversations** that are no longer needed.

# Best Practices

## How to structure documentation in SharePoint

### Recommended Approach

To help everyone find information easily, please follow these simple guidelines:

- Store your documents in the **appropriate folders** for easy navigation.
- **Avoid uploading duplicate files** to reduce confusion.
- **Share only relevant information** that adds value.
- Keep your files **clean, accurate, and regularly updated**.
- Avoid uploading **unsupported file types** (e.g., .zip, .exe, videos), as these cannot be processed by .bid.

The types of **relevant information** that should be included in the folders may include:

- Global agreements and contracts.
- Non-Disclosure Agreements (NDAs).
- Strategic plans.
- Client references.
- Value offerings.
- Applicable regulations and compliance documents.

### Example

Here is an example of a recommended document structure:

02. Inputs

### ***Tenders***

- This folder should contain examples of previous Tenders.

### ***Inputs***

- This folder should contain different information that could help in the generation of the proposal, (ex: The strategies in different areas).

### ***Proposals***

- This folder should contain examples of previous Proposals.

### ***NTTDATA value offering***

- This folder should contain the set of things NTT DATA offers to its clients that make it valuable, like our services, expertise, and technologies.

### ***Feedback of previous Tenders***

- This folder should contain references and feedback from clients of previous Tenders.

## **How to Decide Which .bid AI Option Fits Your Needs**

SharePoint's Use:

Library

Documents

## 1. When Building or Enriching a Proposal

You should use **SharePoint documentation** when creating or refining a commercial proposal in .bid.

### Why:

- SharePoint holds **official, validated, and up-to-date documents** such as reference materials, client contracts, or templates.
- Using them allows the AI to generate responses that are consistent with NTT DATA's standards and wording.
- It enriches your proposal's context and helps the assistant produce **accurate, relevant, and compliant answers**.

## 2. When Updating or Reusing Proposal Content

The document repository can be reused throughout future proposals.

### Why:

- SharePoint serves as your **single source of truth** for all project-related materials.
- It supports efficiency and continuity across teams, ensuring everyone works from the same content base.

## 3. When Using AI Chat for Contextual Queries

When interacting with the AI Chat, you can attach documents; including those from SharePoint; to provide context for your questions.

### Why:

- The AI can draw directly from these documents to craft **context-aware, accurate answers**.
- It ensures your queries are answered based on **trusted company sources**, improving both precision and compliance.

## Custom Actions' Use:

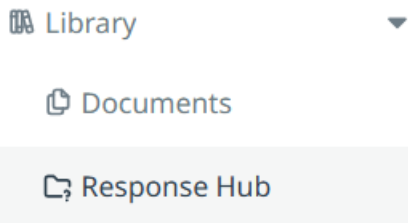

- **When you want to guide the AI with specific instructions or a tailored prompt** to ensure the generated content aligns with your project's objectives, preferred tone, or

client requirements. Actions/Agents allow you to define these customized behaviors in advance, helping the AI produce consistent, high-quality responses that reflect your organization's standards and communication style.

***To guarantee consistency and adherence to approved standards, only administrators can add or update Actions/Agents in the Custom Actions section.***

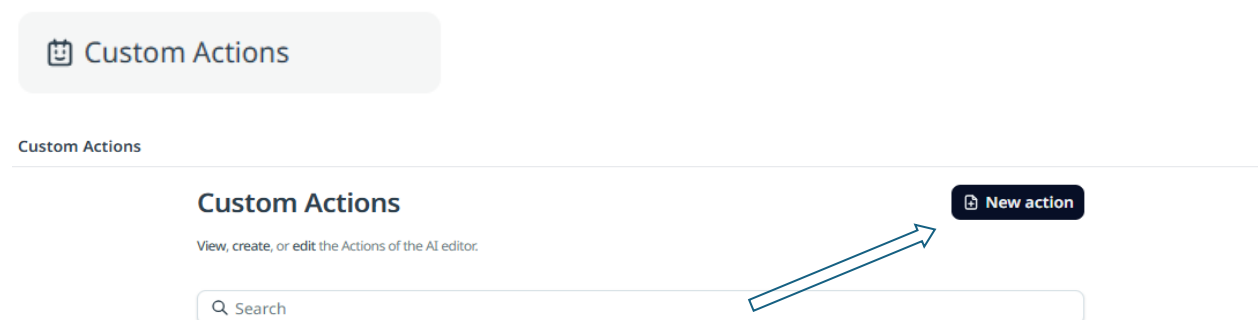

### Response Hub's Use:

- **When reusing standardized or recurring content**, such as company introductions, value propositions, or service descriptions, to maintain consistency across proposals while adapting the information to the specific RFP context.

***Only administrators can add or update these reusable questions and answers within the Response Hub to ensure content quality and alignment with approved messaging.***

## How to create a Custom Action

**New action** [Close]

Tag(without spaces)  Name

How would you like the GPT to respond?

**Custom Instructions**  
Describe the AI action you want it to perform. Example: "Improve the text by incorporating our NTTDATA company values of integrity, innovation, and customer focus."

**Action Type**

Project

Public

Private

Project

How would you like the GPT to respond?

- Example:

**You are an assistant specialized in generating professional content. When you are given an assignment, you should write the text directly, without including greetings, headings, or signatures, so that the content can be part of a larger document. Maintain a formal and professional tone in all responses.**

## Custom Instructions

**Custom Instructions** Given the initial idea: \$CONTENT\$ \n ===\n and the context information: \$DOCUMENT\$ \n ===\n please revise the initial idea to be enrich with the **<Enter Your Text Here>**. Consider integrating new information and any other relevant details from the context text. The goal is to refine the initial idea to make a detailed proposal of the services your company offers, emphasizing a formal and professional tone. **OUTPUT FORMAT:** - Write the response in the **\*\*same language as the provided text\*\***, regardless of the language of this prompt or any other context. - Return only the generated response text (no explanations, notes, or extra sections). - Use **\*\*Markdown syntax\*\*** (headings, bullet points, numbered lists, bold, italics, and tables if relevant). - Do **\*\*not\*\*** use horizontal rules or separators (**\*\***, --- or \_\_\_\_). - Ensure the Markdown is **\*\*well-structured, clear, and easy to navigate\*\***. - Not including tittle and conclusions
